Problem Statement

During the last few decades, with the rise of Youtube, Amazon, Netflix, and many other such web services, recommender systems have become much more important in our lives in terms of providing highly personalized and relevant content.

The main objective is to create a recommendation system to recommend relevant books to users based on popularity and user interests.

Data Summary

The dataset is comprised of three csv files:: User_df, Books_df, Ratings_df

Users_dataset.

- User-ID (unique for each user)
- Location (contains city, state and country separated by commas)
- Age
- Shape of Dataset - (278858, 3)

Books_dataset.

- ISBN (unique for each book)
- Book-Title
- Book-Author
- Year-Of-Publication
- Publisher
- Image-URL-S
- Image-URL-M
- Image-URL-L
- Shape of Dataset - (271360, 8)

Ratings_dataset.

- User-ID
- ISBN
- Book-Rating
- Shape of Dataset - (1149780, 3)

Observations from Users_df (Age)

- The Age range given here is from 0 to 250.
- Outliers in the Age column.

Text(0.5, 1.0, 'Age Distribution Plot')

Age Distribution Plot

Observations from Users_df (Age)

- The Age range distribution is right skewed
- Most active readers lie in age group 20- 40

Observations from Users_df (Location)

- Splitting Location column and analysing country.
- Most active readers are from USA.

Text(0.5, 1.0, 'Count of users Country wise')

Observations from Book_df (Authors)

- Agatha Christie wrote highest number of books in our given dataset

Observations from Book_df (Publishers)

- Harlequin published highest number of books in our given dataset

<matplotlib.axes._subplots.AxesSubplot at 0x7f5a1194a3d0>

Observations from Ratings_df (Book_Rating)

- Higher ratings are more common amongst users
- Rating 8 has been rated the highest number of times

 <matplotlib.axes._subplots.AxesSubplot at 0x7f842a178350>

Data Cleaning(Users_df)

1 Null Value Imputation:

Age column has 40% missing values.

	index	Missing Values	% of Total Values	Data_type
0	Age	110762	39.72	float64
1	User-ID	0	0.00	int64
2	Location	0	0.00	object

Imputing missing values

- Outliers in Age column
- Age has positive Skewness (right tail) so we can use median to fill Nan values,

Data Cleaning(Books_df)

1. Cleaned Year-Of-Publication and Publisher columns.
2. Drop all three URLs columns
3. Imputed null values with mean.

```
books_df.isnull().sum()
```

```
ISBN          0
Book-Title    0
Book-Author   1
Year-Of-Publication  0
Publisher      2
Image-URL-S    0
Image-URL-M    0
Image-URL-L    3
dtype: int64
```

Different Models

1 Popularity Based Recommendation

Book weighted average formula:

$$\text{Weighted Rating(WR)} = [vR/(v+m)] + [mC/(v+m)]$$

Where,

v is the number of votes for the books;

m is the minimum votes required to be listed in the chart;

R is the average rating of the book; and

C is the mean vote across the whole report.

Different Models

0	Harry Potter and the Goblet of Fire (Book 4)	137	9.262774	8.741835
1	Harry Potter and the Sorcerer's Stone (Harry Potter (Paperback))	313	8.939297	8.716469
2	Harry Potter and the Order of the Phoenix (Book 5)	206	9.033981	8.700403
3	To Kill a Mockingbird	214	8.943925	8.640679
4	Harry Potter and the Prisoner of Azkaban (Book 3)	133	9.082707	8.609690
5	The Return of the King (The Lord of the Rings, Part 3)	77	9.402597	8.596517
6	Harry Potter and the Prisoner of Azkaban (Book 3)	141	9.035461	8.595653
7	Harry Potter and the Sorcerer's Stone (Book 1)	119	8.983193	8.508791
8	Harry Potter and the Chamber of Secrets (Book 2)	189	8.783069	8.490549
9	Harry Potter and the Chamber of Secrets (Book 2)	126	8.920635	8.484783
10	The Two Towers (The Lord of the Rings, Part 2)	83	9.120482	8.470128
11	Harry Potter and the Goblet of Fire (Book 4)	110	8.954545	8.466143
12	The Fellowship of the Ring (The Lord of the Rings, Part 1)	131	8.839695	8.441584
13	The Hobbit : The Enchanting Prelude to The Lord of the Rings	161	8.739130	8.422706
14	Ender's Game (Ender Wiggins Saga (Paperback))	117	8.837607	8.409441
15	Tuesdays with Morrie: An Old Man, a Young Man, and Life's Greatest Lesson	200	8.615000	8.375412
16	Charlotte's Web (Trophy Newbery)	68	9.073529	8.372037
17	Dune (Remembering Tomorrow)	75	8.973333	8.353301
18	A Prayer for Owen Meany	181	8.607735	8.351465
19	Fahrenheit 451	164	8.628049	8.346969

43	23	31	188	0.122	0.165	248718

Conclusion

- In EDA, the Top-10 most rated books were essentially novels. Books like *The Lovely Bone* and *The Secret Life of Bees* were very well perceived.
- Majority of the readers were of the age bracket 20-35 and most of them came from North American and European countries namely USA, Canada, UK, Germany and Spain.
- If we look at the ratings distribution, most of the books have high ratings with maximum books being rated 8. Ratings below 5 are few in number.
- Author with the most books was Agatha Christie, William Shakespeare and Stephen King.
- For modelling, it was observed that for model based collaborative filtering SVD technique worked way better than NMF with lower Mean Absolute Error (MAE) .

Challenges

- **Handling of sparsity was a major challenge as well since the user interactions were not present for the majority of the books.**
- **Understanding the metric for evaluation was a challenge as well.**
- **Since the data consisted of text data, data cleaning was a major challenge in features like Location etc..**
- **Decision making on missing value imputations and outlier treatment was quite challenging as well.**

Future Scope

- **Given more information regarding the books dataset, namely features like Genre, Description etc, we could implement a content-filtering based recommendation system and compare the results with the existing collaborative-filtering based system.**
- **We would like to explore various clustering approaches for clustering the users based on Age, Location etc., and then implement voting algorithms to recommend items to the user depending on the cluster into which it belongs.**

Thank You
